Intent of Plan

This plan will provide information on the existing Placer Hills Fire Protection District and the Newcastle Fire Protection District in an effort to inform and educate about the fire districts similarities in service delivery, staffing, equipment, and facilities.

The intent of this plan is to make a reorganization transition of the Newcastle Fire Protection District into the Placer Hills Fire Protection District a “seamless” process without any interruption in services provided by both agencies and increase the level of service to the newly reorganized fire district.

This plan identifies areas that will be addressed in administration, operations, and personnel aspects of a reorganized single fire protection district.

The Current Fire Protection Districts

Placer Hills Fire Protection District

The Placer Hills Fire Protection District (Placer Hills FPD) services a 34 square mile area that serves approximately 15,000 full time residents. The District serves the communities of Applegate, Clipper Gap, Eden Valley, Meadow Vista, Weimar, and unincorporated areas of Colfax. Interstate 80 runs through the entire district, a main transportation route from the bay area to the Sierras in northern California. On the southern border is the North Fork American River and on the northern border is the Bear River, both provide recreational opportunities for residents and visitors alike.

Placer County established Company No. 31 in 1979 at the Weimar Institute to assist in the County contract with the California Department of Forestry. In 1980, members of the Applegate and Weimar communities came together to develop Engine Company No. 31. The community built the fire station in Applegate in 1983 and the County provided an engine and a water-tender. In 1988, the Meadow Vista Fire Protection District, Company No. 31 and the Ponderosa Fire Brigade annexed into the Placer Hills Fire Protection District.

With start-up monies provided by the Placer County Board of Supervisors, Placer Hills Fire Protection District built a new station at Weimar Crossroads and purchased a new mini-pumper quick attack in 1990. Also in the same year, the Fire Board hired a part-time Fire Marshal to establish a fire prevention program throughout the District.

To further enhance the fire protection of this District, the Board of Directors passed a Fire Suppression Benefit Assessment in 1991, which provided daytime staffing during weekdays. Placer Hills Fire Protection District started providing non-transporting Advanced Life Support Services in October 1997. In September 2001 the District staffed one engine with a crew of two, 24 hours per day, and an additional engine with 2 during work hours and fire season weekends. The community approved another Benefit Assessment in June 2004. This enabled the District to staff an engine at both the Meadow Vista and Weimar fire stations 24/7. In 2019 the community approved an additional Benefit Assessment to continue ALS and full staffing at both stations. The Fire District has responded to over 1580 calls for service annually.

The District is governed by a five member Board of Directors of which are elected by voters of the District. There are currently 22 full-time employees, supported by a number of part-time and seasonal/intern personnel.

Newcastle Fire Protection District

Newcastle Fire Protection District is located in the Sierra Foothills of Placer County, California. The District was established in 1868 and from 1922 to 2023 has been located in the same building in the heart of the town of Newcastle. The District covers 15 square miles, serves approximately 6200 residents, and has responded to over 700 calls for service annually.

In 2023 the new Station #41 was completed becoming the first actual fire station for the Newcastle Fire Protection District.

The District is governed by a five member Board of Directors of which are elected by voters of the District. The Fire Chief (currently shared with Placer Hills Fire Protection District) oversees 6 full time employees and active volunteer firefighters.

The Newcastle Fire Protection District cross staffs both a Type 1 and Type 3 Wildland Interface Engine with a minimum staffing of two Personnel. Both personnel are trained to a minimum of EMT-1 with advanced scope of skills. One captain and one engineer is minimum staffing with intern, seasonal and volunteer personnel augmenting staffing to provide three personnel when possible.

The District is an “All-Risk” department that provides a timely response to all types of fires, medical emergencies, rescues, and hazardous material incidents. Additional services include a year-round fire prevention program incorporating building occupancy inspections, new building plan reviews and an aggressive risk reduction and Public Education delivery model working with the Greater Auburn Area Fire Safe Council.

The District currently has two benefit assessments levied of which bring additional funding to support the Fire District.

Currently the Newcastle Fire Protection District has an agreement with Placer Hills Fire Protection District for Administrative Services that include: A Fire Chief, District Manager, Fire Marshal services, and Battalion Chief coverage. There are no Chief Officers or Administrative staff currently employed by the Newcastle Fire Protection District.

Newcastle, CA 95658

Name of Reorganized Fire Protection District

The name of the reorganized single fire protection district will be the Placer Hills Fire Protection District.

The Fire Department Identification Number will be: 31060

The FIRESCOPE agency Identifier will be: PHF

Administrative functions will be conducted at the Placer Hills Fire Protection District

Administrative offices located at:

17020 Placer Hills Rd.

Meadow Vista, CA 95722

Governance

The Placer Hills Fire Protection District and Newcastle Fire Protection District are individually governed by a five (5) member Board of Directors elected by registered voters within the boundaries of each fire protection district.

Upon reorganization the single Placer Hills Fire Protection District will be governed by a five (5) member Board of Directors. The initial formation of the “new” board will be comprised of three (3) seats from the original Placer Hills Fire Protection District Board and two (2) seats from the former Newcastle Fire Protection District Board.

The appointments to fill the seats of the reorganized fire district will be determined by the existing Board of Directors of each district and may be dependent upon the date LAFCO confirms implementation of the new reorganization, the term(s) of each Board Member, and the desire to serve by each Board Member.

Once the reorganization is in place the Board of Directors will elect Officers of the Board. After the reorganization is in effect, Board Members of the Placer Hills Fire Protection District will be elected as terms dictated, by registered voters within the boundaries of the reorganized fire district.

Agency Interactions, Support, and Affiliation

The newly reorganized Placer Hills Fire Protection District boundaries will fall under State Responsibility Area (SRA) where Cal Fire Department of Forestry and Fire Protection is responsible for wildland fires. The Placer Hills Fire Protection District works cohesively with Cal Fire on these types of incidents.

Additionally, Placer Hills Fire Protection District and Newcastle Fire Protection District operate under the Western Placer County Fire Chiefs Agreement where Placer County Fire Agencies respond automatic aid to one another with the closest resource to respond concept.

The newly reorganized fire district will be within two (2) Fire Safe Councils, the Greater Auburn Area Fire Safe Council, and the Placer Sierra Fire Safe Council. The fire district will continue participation and support in both of these Fire Safe Councils as currently practiced.

Both fire districts have, and will continue to support FIREWISE Communities, and continue to work with the Placer County OES FIREWISE coordinator in educating and preparing communities for wildfire preparedness.

Both the Newcastle Fire Protection District and Placer Hills Fire Protection District are participants in the Local Hazard Mitigation Plan (LHMP) through Placer County and will continue to do so as a single fire district once re-organized.

Both agencies have collaborated in the Community Wildfire Protection Plan (CWPP) and will continue to do so as a single fire district.

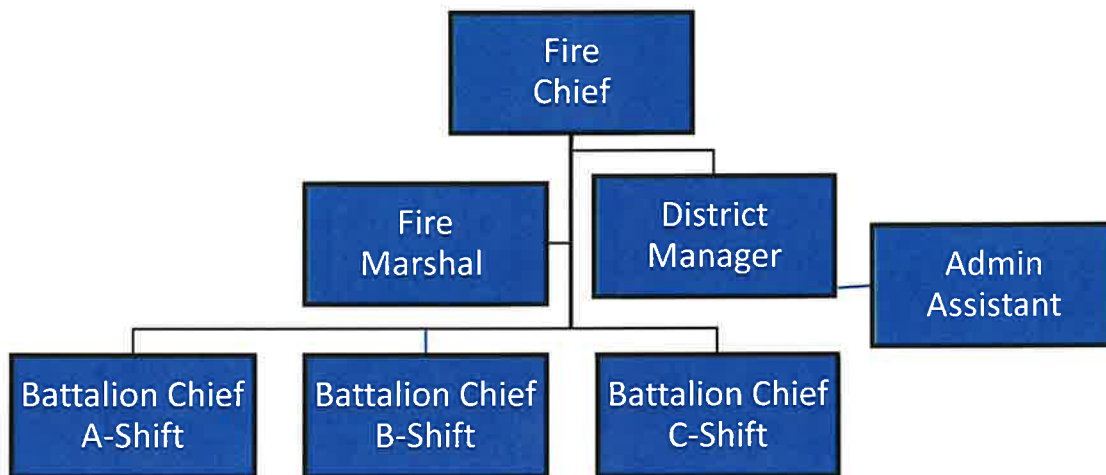

Administration

The Newcastle Fire Protection District has been under an agreement with the Placer Hills Fire Protection District for administrative services, including emergency response command and control, since 2016. This area will see virtually no change and will function the same.

The administration will consist of a Fire Chief, Fire Marshal (currently part-time), District Manager, Administrative Assistant (currently part-time), and three (3) Battalion Chiefs. The Fire Chief and District Manager work a 40-hour week, typically Monday through Friday, dependent upon additional meetings and incident related events. The Fire Marshal and Administrative Assistant work Monday through Friday various days and hours, also dependent upon additional meetings and incident related events.

Battalion Chiefs (3) are assigned to a shift schedule which consists of 48 hours “on duty” and 96 hours “off duty”. Battalion Chiefs are also subject to additional days and hours depending upon additional meetings and incident related events.

Administration Organization

Policy and Procedures

Both Fire Districts subscribe to the Lexipol Policy and Procedure program, a third-party professional company that develops and maintains standard policies and procedures for fire agencies across the nation.

Over the last several years both Fire Districts have adopted such policies and procedures by each Board of Directors. Such policies and procedures govern each Fire District currently and are identical. There will be no change other than the reorganized Fire District will function under one single set of Policies and Procedures.

Codes and Ordinances

Over the past several years both Fire Districts have adopted codes and ordinances equally, meaning they were the same for each district. This includes such adoptions as the California Fire Code used in the application of fire prevention services, Standard Conditions for Planned Development, Placer County's Hazardous Vegetation Ordinance, and fees for services. There will be no change to any codes and ordinances other than they will be applied under the reorganized Placer Hills Fire Protection District.

General benefit of one administered Fire District

Because Newcastle Fire Protection District has been administrated under the Placer Hills Fire Protection District for several years, administrative functions will not change. Benefits of one organized Fire District include having one Board of Directors instead of two of which will reduce staff time in conducting parallel business, one finance system including budgeting, fee collection, and reporting, one payroll system for all employees, one MOU for labor personnel, one website for information, one point of contact for public interaction.

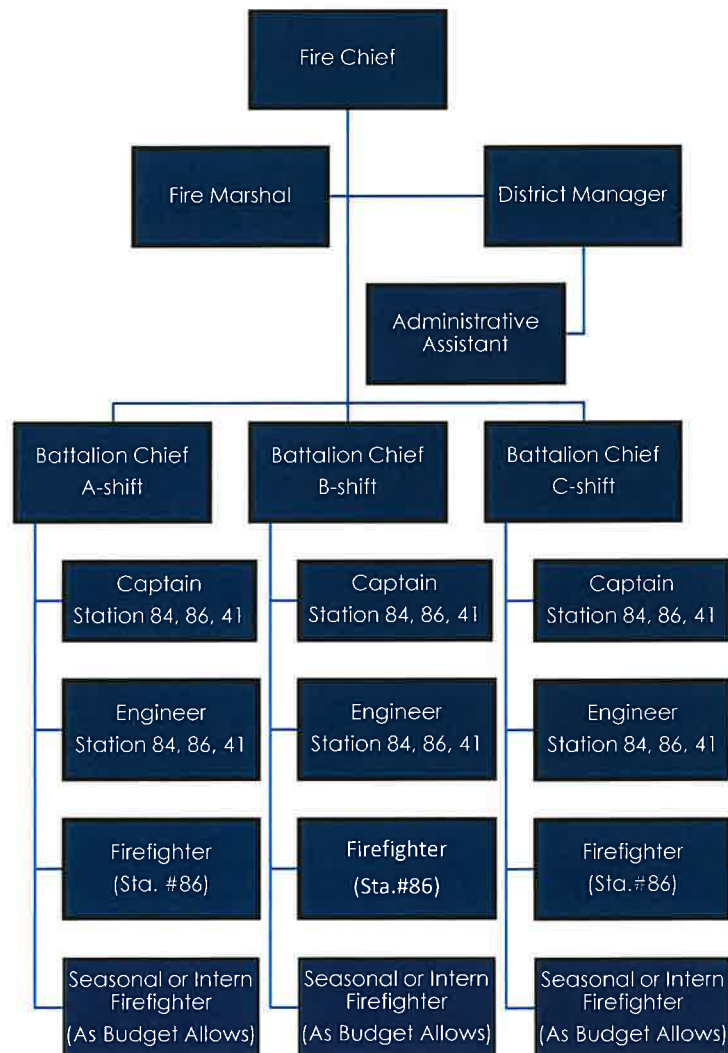

Basically, by having one single Fire District some administrative tasks may be reduced by 50% thus resulting in overall cost savings and greater efficiency in overall services provided.

Command & Control, Personnel Supervision, Services Provided, Staffing

Under the agreement with Placer Hills Fire Protection District the Newcastle Fire Protection District has functioned under the command-and-control staff for emergency response and day-to-day operations. The position of Battalion Chief is the primary command-and-control staff.

Each Battalion Chief is assigned to a shift, A, B, & C. All line personnel are also assigned to the same shift schedule. In addition to emergency response for command of an incident, the Battalion Chief is responsible for the supervision of station personnel during each shift. This model will not change under the newly reorganized Fire District. The advantage is this model has been in place for several years and personnel are familiar with their assigned subordinates and supervisors.

Command and Control Model

Current Placer Hills Fire Protection District fire stations are staffed with one (1) Fire Captain, and one (1) Engineer, of which one personnel is a Paramedic. At certain times through special programs and as funding allows, additional staffing may be added that may include one (1) additional Firefighter, of which may be seasonal or intern personnel.

Placer Hills Fire Protection District budget for the Fiscal Year (FY) 2024/2025 includes the transitioning of six (6) seasonal Firefighter positions to three (3) full-time-employees (FTE's) Firefighter positions. This additional staffing includes supporting the three (3) new Firefighters to attend paramedic training at Sierra College starting in 2025. The primary goal of this new program is to enhance day to day FF/Paramedic staffing within the District and support recruitment and retention of paramedics; an essential advanced life support service for the community.

This will enhance the depth of Paramedics for newly reorganized Fire District. The three (3) additional Firefighter's will staff Station #86 of which will enable the Fire District to staff additional specialized resources such as the Water Tender, Breathing Support Unit, and All Terrain Vehicle (ATV). This will greatly enhance services to the newly reorganized Fire District.

The current Newcastle Fire Protection fire station is staffed with one (1) Fire Captain, and one (1) Engineer. Of which one or more personnel is Emergency Medical Technician (EMT) certified.

The reorganized Fire District will provide Advance Life Support (ALS) services at all staffed fire stations. The former Newcastle Fire Protection fire station, station #41, will upgrade to include one personnel certified as Paramedic. This will be an increase in services not currently provided by Newcastle Fire Protection District.

Minimum Staffing for the reorganized Fire District will be:

Station #84- 1 Fire Captain, 1 Engineer, (one or more personnel will be paramedic)

Station #86- 1 Fire Captain, 1 Engineer, 1 Firefighter (one or more personnel will be paramedic)

Station #41- 1 Fire Captain, 1 Engineer, (one or more personnel will be paramedic)

Station #85- Day staffing as maintenance facility with 1 Fire Mechanic/Fire Captain

Additional staffing may occur based on budget allowance that may include seasonal Firefighters, and or intern Firefighters. When such programs are in place assignments will be based on staffing needs throughout the reorganized Fire District.

The reorganized Fire District will have the capability to provide the following apparatus throughout the Fire District and for auto and mutual aid to other fire agencies:

Three (3) Type 1 engines, one (1) reserve Type 1 engine

Two (2) Type 3 engines

One (1) Water Tender

One (1) Type 6 engine, (OES Fire & Rescue)

One (1) Rescue Unit with companion equipment

One (1) All Terrain/All Weather utility response vehicle with trailer

One (1) Breathing Support apparatus

Three (3) Utility vehicles

Newcastle Personnel Integration into Placer Hills Fire Protection District

The Newcastle Fire Protection District employs six (6) full-time employees (FTE's). Three (3) Fire Captains and three (3) Engineers.

These six FTE's will become Placer Hills Fire Protection District employees upon reorganization.

The six (6) Newcastle Fire Protection District FTE's are represented by the International Association of Firefighters (IAFF) under Local 3800, the same Local that represents Placer Hills Fire Protection District employees. There is no proposed change to IAFF representation for the reorganized fire district, employees will remain represented by Local 3800.

Currently the Newcastle Fire Protection District employees and the Placer Hills Fire Protection District employees operate under separate Memorandum's of Understanding (MOU). All represented employees of the newly reorganized fire district will operate under a single Memorandum Of Understanding (MOU) once the reorganization has been finalized.

Currently Newcastle Fire Protection personnel are not covered by the California Public Employees Retirement System (Cal PERS) whereas the Placer Hills Fire Protection District employees are. Once the newly organized Fire District is formed all employees will be in the Cal PERS program. The former Newcastle Fire Protection District employees will fall under the Public Employees' Pension Reform Act (PEPRA) as new employees. The current Placer Hills Fire Protection District PEPRA Plan for new employees is 2%@57.

Newcastle Fire Protection District employees will retain seniority when becoming Placer Hills Fire Protection District employees. Meaning that Newcastle Fire Protection District employees will "carry" forward all years of service with the Newcastle Fire Protection District as Placer Hills Fire Protection District employees.

Shift schedules (work schedules) will not change since both agencies use the same shift schedule. The current shift schedule is 48 hours on duty and 96 hours off duty (2 days on/4 days off).

Newcastle Fire Protection District employee's wages have been generally less than Placer Hills Fire Protection employees. Under reorganization Newcastle Fire Protection Employees will be placed on the approved MOU pay schedule for the corresponding rank, Captain or Engineer, at the appropriate step that is at or above their current pay schedule.

Insurance Coverage/Providers

Both agencies currently are covered with the following insurances:

Liability, Property, Vehicle, Workers' Compensation, and Health Insurance for employees.

Placer Hills Fire District is covered under the Fire Agency Insurance Risk Authority (FAIRA) for liability, property, and vehicle insurance coverage. FAIRA is a Joint Powers Authority (JPA) comprised of many fire agencies throughout the state of California that enables such agencies to be "self-insured" a common occurrence among governmental agencies.

Placer Hills Fire Protection District utilizes Northern California Special District Insurance Authority (NCS DIA) for Workers' Compensation coverage. This is a JPA comprised of many special districts throughout northern California mainly consisting of fire agencies.

Newcastle Fire District uses CalMutuals JPRIMA: California Association of Mutual Water Companies Joint Powers Risk and Insurance Management Authority for liability coverage coverage.

Newcastle Fire Protection District utilizes Fire Risk Management Services (FRMS), a JPA self-insured system comprised of like fire agencies throughout California for Workers' Compensation coverage.

Upon reorganization, the former Newcastle Fire Protection District will be covered under the Placer Hills Fire Protection District policies for both Worker's Compensation and Liability.

Newcastle Fire Protection District employees that elect to take health care coverage are covered under a health care plan provided by the Newcastle Fire Protection District that is a private plan between the provider and the Fire District. The Fire District pays a portion of the monthly costs and the employee pays a portion of that cost based on current MOU stipulations. Employees electing not to enroll in health care coverage do so as certifying the individual is covered under another health plan provided by a family member.

Placer Hills Fire Protection District employees are covered under the California Public Employees Retirement System (Cal PERS) health plans as members of Cal PERS. There are several health plans available to employees and the Fire District pays a portion of the monthly costs and the employee pays a portion of that monthly cost based on current MOU stipulations. Employees electing not to enroll in health care coverage do so as certifying the individual is covered under another health plan provided by a family member.

Since former Newcastle Fire Protection District employees will be absorbed into the Placer Hills Fire Protection District and become members of Cal PERS, employees will have the same health care benefits under the Cal PERS health plan system. Costs paid by the Fire District and the employee(s) will be determined by the current MOU for represented employees.

Newcastle Fire Protection District Assets and Equipment

Newcastle Fire Protection District capital assets and equipment include, fire facilities (fire station, building and property), fire apparatus and vehicles, and fire equipment.

There is one (1) fire facility asset, the real property and building located at 9350 Old State Highway, Newcastle, CA 95658.

Fire apparatus and vehicles include:

2004 HME SFO-1871, Type 1 fire engine, E41

2013 Freightliner, Pierce, Type 3 fire engine, B41

2014 Chevrolet Tahoe, Utility vehicle SUV, U41

A complete inventory of fire related equipment has been assembled (see Attachment “A” for details).

Upon reorganization, Placer Hills Fire Protection District, will retain ownership of all assets including fire facility, apparatus and vehicles, and related fire equipment.

All assets will become the property of Placer Hills Fire Protection District and be maintained, repaired as needed, and insured as Fire District assets.

The Fire Station #41 at 9350 Old State Highway, Newcastle, CA. has an outstanding loan through United States Department of Agriculture (USDA). Placer Hills Fire Protection District will assume the remainder of this loan and make the required annual payments to USDA.

Benefit Summary of a Single Reorganized Fire Protection District

What is unique about this reorganization between Placer Hills Fire Protection District and Newcastle Fire Protection District is that both agencies have for many years functioned operationally as one agency.

Through one administration, designated command and control officers, consistent daily operations, and personnel supervision, efficiencies have been achieved in service delivery to the Fire Districts' constituents.

By operating this way redundancy has been eliminated where Newcastle Fire Protection District has not had to employ a Fire Chief, Duty Officer(s) and administrative support, thus utilizing funding in an efficient manner.

Although reorganizations, consolidations, and mergers are assumed to save public funding, it is often not realized in a public service such as fire protection. The focus is on efficiency, higher level of service, consistency in service delivery, and safety of personnel, with the allotted funding available.

In short, reorganization creates efficiencies that maximizes funding to its fullest potential.

Other general benefits include:

- Improved service to the customer
- Increased efficiency of resources
- Improved training and fire ground operations
- Reduction of resource overlap, leading to improved fiscal responsibility to the community

Benefits specific to this reorganization include:

- Greater depth of resources by having three (3) 24/7 staffed stations
- More resources to support Placer County Fire Agencies and the California Mutual Aid System
- Newcastle area will be provided with Advanced Life Support (ALS Paramedics), a significant increase in service
- Greater potential for personnel advancement and work assignments in a larger agency
- Increased purchasing power by a single larger agency which may result in cost savings
- Reduction in tasks by Administration not having to serve two Boards and two monthly meetings
- Reduction in staff time to streamline accounting processes into one single process, potential cost savings
- No personnel will be eliminated from employment, all employees will be combined into one single work force.
- Both Fire Districts are adhering to former Municipal Service Reviews (MSR's) recommending fire district consolidation
